

Korebalance®

now with  neurotracker inside!

The Korebalance family of products offers engaging programs to improve outcomes in orthopedic and neurosensory rehabilitation.

The Korebalance is an FDA recognized advanced rehabilitation system designed for professional use that utilizes cutting edge interactive technology to deliver neurosensory training and assessment. The platform incorporates a high-speed accelerometer for 360 degrees horizontal and 20 degrees vertical movement tracking.

Using patented variable stability, the Korebalance provides clinicians accurate and objective tools to assess patients' balance including static and dynamic balance and cognition tests.

The Korebalance also offers training programs developed to improve balance, posture, coordination, stability, strength, cognition/reaction time and peripheral visual acuity.

The programs use interactive 3D games to engage patients in various exercises and enable clinicians to customize treatment plans for patients with all levels of ability.

NEW for 2022 is the addition of an optional NeuroTracker software suite!

When used consistently for just 6-minutes a session NeuroTrackerX heightens human performance, increases mental awareness and resilience in the face of adversity. The program homes in on the brains core functions and trains them much like any other muscle in your body.

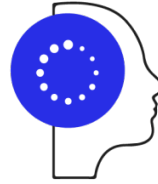

Executive Function

Focuses in on your functionality in organizing, planning, and prioritizing.

Peripheral Vision

Sense motion by being able to see objects at wide angles without turning your head.

Visual Info. Processing

Process and analyze accurately what is being seen and storing it in visual memory for later use.

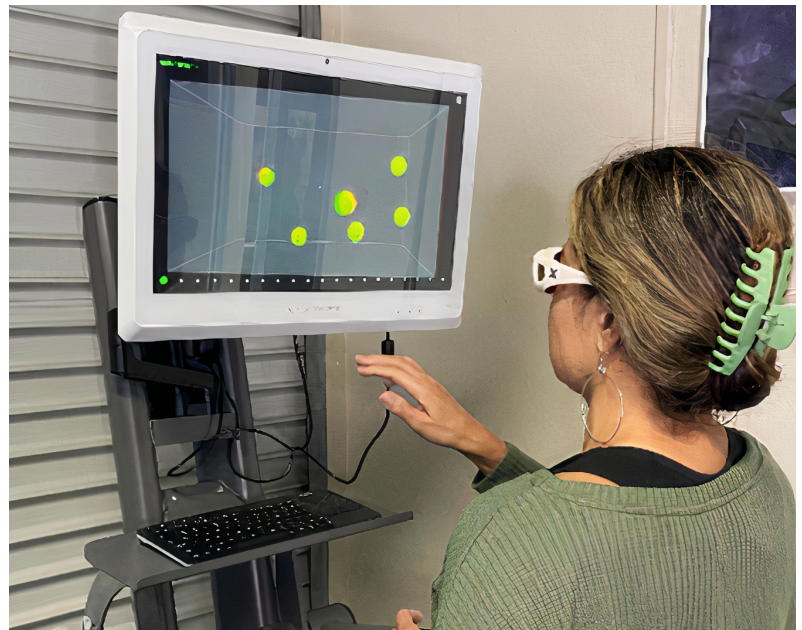

Working Memory

Improve performance on reasoning tasks and reading comprehension, as well as functioning through your day.

The Korebalance with NeuroTracker can be used in concert or independently, depending on abilities of the client and outcomes desired by the clinician.

Combining the Korebalance progressive core stabilization and balance challenges with the NeuroTracker software program provides a safe, state of the art, proven small footprint multi tasking modality.
